

(2027)

Summary

Aryan Gupta

SDE Fresher | Aspiring Full-Stack Developer —
React, Node.js,
TypeScript | Building AI-Integrated Web Apps |
MCA AI/ML, UPES

Dehradun, Uttarakhand, India

I'm Aryan — an MCA student specializing in AI/ML, working on full-stack web applications end-to-end: from how the database is structured to the screen a user actually taps on. Most of my projects follow a similar thread — get the backend right first. I've worked with JWT-based authentication, role-based access, and relational schemas designed to hold up under multi-table transactions. One of my projects had 10+ REST API endpoints spread across 4 route modules, and keeping things consistent when multiple requests hit at once taught me more about databases than any course did. Lately I've been carrying that same mindset into AI — getting language models to return structured, schema-valid output that an app can actually rely on, instead of just chatting back at a user. What keeps me excited is how fast things move in this field — the kind of innovation that comes purely from people who enjoy sitting down and figuring things out. Computer Science has always pulled me in for that reason: a lot of genuinely useful tech started as one developer's idea before it became something people actually use. Getting to be part of that, even in a small way right now, feels like the right place for me to be. I'm currently looking to start as a Software

UPES

Top Skills

Express.js

TypeScript

React.js

Development Engineer — somewhere I can keep working on fullstack products, with room to grow into AI-integration work over time.

Happy to connect with anyone working in this space.

Master of Computer Applications - MCA, Artificial Intelligence · (2025 - 2027)
